To whom it may concern

I have had the pleasure to participate in the Summer School of Science in Požega (Croatia) in July 2017 and it was a very rewarding experience. My duty was to hold a workshop on theatre methods applied to scientific public speaking. The workshop spanned during three days for an overall time of approximately 10 hours. I worked with about twenty 15-16 year old high school students who had converged to Požega from all over the world.

During the three days I spent with the students and the organizers I had the opportunity to appreciate the high level of commitment on all sides. The organizers were always very aware of the needs of the students and took care of them in an efficient, professional and caring manner. At the same time, the students showed great sense of responsibility with respect to the tasks they were given and pride in participating to such an exclusive project.

I am happy to have been given the opportunity to share my knowledge and ideas with them because I believe that young people face many challenges today and their proficiency in the scientific issues of our times will make them better citizens. This is exactly what I feel the Summer School of Science wants to achieve and, in my opinion, it is fully successful in doing so.

I hope that the School will continue to be offered and that it will be supported more and more by those Institutions that have the opportunity to make it grow: financially, organizationally and scientifically.

I strongly believe that every high school student who is serious about her/his studies should participate in a Summer School like this... at least once during their course of studies!
