### Letter of Recommendation for S3/S3++ Summer School of Science in Pozega

This is a letter to express my recommendation for future funding applications for the S3/S3++ Summer school of Science.

It was my pleasure to hold a lecture at the Summer School 2015, as well as meeting the students, discussing their assignments, and watching their final presentations. The students were divided in six groups with tutors in each group, and for ten days they worked on scientific projects related to important fields and relevant problems. I was highly impressed by the student's understanding of science and, as well as the tutors commitment to teaching.

The organization of the Summer School was also very well performed. It was easy to reach Pozega, and as a speaker I was very well taken care of and given all necessary information. Additionally, the classes, meals and lodgings were organized smoothly.

What impressed me most was the commitment of the students, their motivation for a career in science, and how far they had come in scientific thinking. I believe that this Summer School is an ideal introduction to life in science.

Sincerely,

Thomas Fleischer
